# Evolutionary algorithms for cellular automata and applications

Carlos Ramos

Prof. Associado da Universidade de Évora  
membro do CIMA

**Abstract:** Evolutionary and genetic algorithms applied to cellular automata are considered. Certain processes are described, such as recombination, assembly, and mutation, and used to transform specific families of cellular automata. Evolving populations of cellular automata and its main characteristics are analysed. Applications are discussed, namely to pseudo random number generators and simulation of natural phenomena such as fractures.

**Keywords:** Cellular automata, evolutionary algorithms, genetic algorithms, simulation.

**Acknowledgements:** This talk has been partially funded by national funds through the FCT – Fundação para a Ciência e a Tecnologia, I.P., under the scope of the project UIDB/04674/2020 (<https://doi.org/10.54499/UIDB/04674/2020>), Centro de Investigação em Matemática e Aplicações (CIMA).
